Malang, East Java, Indonesia

PROFESSIONAL SUMMARY

Full-Stack Developer with 4+ years of experience building and maintaining web-based business applications, from responsive React and TypeScript interfaces to Node.js (NestJS/Express) and PHP (CodeIgniter) backends with PostgreSQL and MySQL. Built a CMMS and delivered WMS modules and real-time monitoring systems for industrial clients including Pertamina Lubricants, JX Nippon Oil, and Perum Jasa Tirta, while leading a development team. Experienced in Linux server deployment with Nginx and PM2, API integration, and production troubleshooting.

SKILLS

Technical Skills

- **Frontend:** React.js, TypeScript, JavaScript, Vite, HTML5, CSS3, Tailwind CSS, Material UI, DaisyUI, Bootstrap, React Hook Form, Yup
- **Backend:** Node.js, NestJS, Express.js, PHP (CodeIgniter 3), Python (Flask), RESTful API development, JWT, RBAC
- **Database:** PostgreSQL, MySQL, relational database design
- **DevOps & Infrastructure**: Linux (Ubuntu Server), Nginx, PM2, PHP-FPM, Git/GitHub, server configuration, production troubleshooting, Docker (basic)
- **Integration & Real-time:** REST API integration and Postman
- **Mobile (additional):** Flutter

Soft Skills

- Team leadership
- Client communication
- Cross-functional collaboration
- Code review
- Technical documentation (user manuals)
- Project scheduling
- Process flowcharts

Languages

- Indonesian (Native)
- English (Intermediate)

PROFESSIONAL EXPERIENCE

PT Tekno Klop Indonesia **Nov 2022 - Present**
Full-Stack Developer / Team Lead

- Redeveloped and maintain the Smart Information Display (SID) for Pertamina Lubricants QA Units (Gresik & Jakarta), building the React/Vite frontend with Minimal UI and NestJS/Prisma/PostgreSQL backend services, plus an Express.js integration service connecting SID to SiAP.
- Developed a Warehouse Management System (WMS) module within the SiAP platform for Pertamina Lubricants using CodeIgniter and MySQL, enabling real-time inventory integration and multi-location stock tracking across Jakarta, Gresik, and Cilacap.
- Designed, built, and maintain a Computerized Maintenance Management System (CMMS) for PT JX Nippon Oil from scratch using CodeIgniter and MySQL, supporting preventive maintenance workflows and role-based user access.
- Engineered responsive monitoring dashboards for Perum Jasa Tirta, covering six monitoring systems, with React and TypeScript, integrating telemetry data and REST APIs to support real-time operational monitoring.
- Managed application deployments and production troubleshooting across Linux-based servers, configuring Nginx, PM2, and PHP-FPM to maintain application availability and resolve server-side issues.
- Built frontend interfaces for internal business applications at PT Tekno Klop, including correspondence management and overtime/K3 applications, using React, Vite, and TypeScript with Tailwind CSS or Material UI depending on the project, and integrating REST APIs for internal users.
- Led project delivery for industrial clients including Pertamina Lubricants and Perum Jasa Tirta, as well as internal company applications, defining project timelines, documenting system flows, and producing user manuals for handover to operations teams.

ADDITIONAL EXPERIENCE

Flutter Development Training - Alterra Academy **Feb 2022 - Jul 2022**

- Developed projects (MayFood, Point.id) covering UI design and state management.

Mobile Volunteer Talent Scouting Academy (TSA), Digital Talent Scholarship **Aug 2022 - Nov 2022**

- Developed Flutter learning materials and practical exercises to support mobile application development training.
- Assisted participants with technical guidance and hands-on implementation of Flutter projects.

Internet of Things Intern, HUB Politeknik Negeri Malang **Sep 2021 - Dec 2021**

- Developed and tested IoT-based smart home applications using the Edu-IoT ecosystem.
- Integrated IoT devices with monitoring and control features while validating system functionality and performance.

EDUCATION

Bachelor of Engineering - State Polytechnic of Malang | Information Technology

State Polytechnic of Malang | Aug 2018 – Aug 2022
GPA: 3.64 / 4.00
Relevant coursework: Database Systems, Software Engineering, Web Development
Final Project: Electrical Energy Monitoring and Analysis System at Home Using an IoT-Based Prophet Algorithm
Technologies from Final Project: React.js, Python, Flask, IoT, REST API, Prophet Forecasting
• Developed a web dashboard for real-time energy monitoring and analytics.
• Implemented energy consumption forecasting using Prophet.
• Integrated IoT devices with a Flask-based backend and React frontend.

CERTIFICATIONS

- **Meta Front-End Developer (Coursera)**
- **Dicoding Indonesia (React, Flutter, Data Processing, Data Science with Microsoft Fabric)**
- **Participant of MSIB Kampus Merdeka Batch 2 Comprehensive Flutter Mastery Program, Alterra Academy**
- **Codepolitan (Git, PHP, MySQL, Tailwind CSS, JQuery, Javascript, AJAX, UI/UX, CSS)**
